(54) Title: APPARATUS AND METHOD FOR PROMOTING BLOOD CIRCULATION TO AN INJURY

(57) **Abstract:** There is an apparatus for promoting or assisting the healing of an injured area (26) of human anatomy by alternative applications of a fluid at differing temperatures. The apparatus includes a spray applicator (23) and a reservoir (1) for the fluid with a pressure pump (14) and fluid heater (11). The apparatus in use is arranged such that the spray applicator (23) is connected to the pressure pump (14) whereby timed sprays of the fluid from the reservoir (1) at a selected temperature can be applied to the injured area (26) to increase blood circulation.
